

## Practical-1.

### \* Single Player Game.

```
import random as rd
```

```
print("Guessing the Numbers")  
print("Range of Numbers")
```

```
start = int(input("Enter Starting Point : "))  
end = int(input("Enter Ending Point : "))
```

```
think = rd.randint(start, end)
```

```
while True:
```

```
    guess = int(input(f"Guess the {'Even' if think % 2 == 0 else 'Odd'} number : "))
```

```
    if (guess > think):
```

```
        print("Guess a lower number")
```

```
    elif (guess < think):
```

```
        print("Guess a higher number")
```

```
    else:
```

```
        print("You guessed correct number")
```

```
        # break
```

```
        break
```
