

Practical :- 1

◦ Setting up React Environment, Create React APP

Step : 1 : Installation

- First, ensure you have Node.js and npm installed
- Then, open your terminal and run this command below.

```
npm create-react-app my-react-app
```

- This command creates a new React app named "my-react-app".

Step : 2 : Project Structure

- After initialization, your Project Structure will look like this :-

```
✓ My-React-App.  
  > node_modules.  
  ✓ public  
    ★ favicon.ico  
    <> index.html  
    □ logo122.png  
    □ logo512.png  
    23 Manifest.json
```

V Src

APP.css

JS APP.js

JS APP.test.js

index.css

JS index.js

JS SetupTest.js

- node_modules :- Contains project dependencies
- Public :- Holds static assets like HTML and favicon.ico
- Src :- Main source code directory.
- index.js :- Entry point for your app, where ReactDOM renders the root component.
- APP.js :- The root component where you build your app's structure
- APP.css :- CSS file for styling the app component.
- index.css :- Global CSS file for styling.
- logo.svg :- An example logo image
- package.json :- Manages project dependencies and script.
- README :- Documentation for your app.

Step : 3 : Running the APP

- Use the following Commands to navigate into your Project directory and start the development Server :

```
cd my-react-app
```

```
npm start
```

- This will launch your React app at <http://localhost:3000>

 React APP x +  -  x
