

Practical :- 03

Step :- 1 : Start a React APP

- IF not done already, run this in terminal :
bash

```
npm create-react-app my-virtual-dom-app
cd my-virtual-dom-app
npm start
```

Step :- 2 : Open src / App.js

- delete the existing code, and copy-paste this easy version :

JSX

```
import React, { useState } from "react";
```

```
function App() {
```

```
  const [count, setCount] = useState(0);
```

```
  return (
```

```
    <div style={styles.textAlign} className="center" margin-top="50px">
```

```
      <h1> Virtual DOM Example </h1>
```

```
<h2> Count : <count> </h2>
<button onclick = <? => SetCount(count + 1) & >
Increase </button>
</div>
);
$
export default App;
```

Step 3: Run the App

• Run :

npm start

open in browser : <http://localhost:3000>

Output :-

Virtual DOM Example		
Count : 6		
	Increase
