

Assignment 1

1. Define computer networking. Why is networking important in Java applications?
2. Differentiate between TCP and UDP protocols. Where would you use each in Java?
3. What is the purpose of the InetAddress class in Java?
4. Explain the role of the Socket and ServerSocket classes in Java networking.
5. What is a DatagramSocket? How does it differ from a Socket?
6. Explain the concept of Java RMI. How does it help in distributed computing?
7. Write simple program of RMI implementation with database? (Paste the screen shot of code and output.)
8. How does the UnicastRemoteObject class help in creating remote objects in Java RMI?
9. Outline the steps needed to create an RMI server and client to demonstrate a remote method call.
10. What is the role of the RMI Registry and how do you bind and look up remote objects?
11. Explain how RMI can be integrated with a database backend to provide remote access to data.
