* MainActivity.java

```
package com.example.animationapp;

public class MainActivity extends AppCompatActivity {

    Spinner spinner;

    ImageView imageView;

    String[] animations = {"Rotate", "Fade", "Zoom"};
```

① Override

```
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);
```

```
    spinner = findViewById(R.id.spinnerAnimations);
    imageView = findViewById(R.id.imageView);
```

```
    ArrayAdapter<String> adapter = new ArrayAdapter<>
        (this, android.R.layout.simple_spinner_item,
        animations);
```

```
    adapter.setDropDownViewResource(android.R.layout
        simple_spinner_dropdown_item);
    spinner.setAdapter(adapter);
```

```
    spinner.setOnItemClickListener(new AdapterView
        .OnItemSelectedListener() {
```

② Override

```
public void onItemSelected (AdapterView <?>
    parent, android.view.View view, int
    position, long id) {
```

```
    Animation anim = null;
```

```
    switch (animations[position]) {
```

```
        case "Rotate":
```

```
            anim = AnimationUtils.loadAnimation
                (getContext(),
                 R.anim.rotate);
```

```
            break;
```

```
        case "Fade":
```

```
            anim = AnimationUtils.loadAnimation
                (getContext(),
                 R.anim.fade);
```

```
            break;
```

```
        case "Zoom":
```

```
            anim = AnimationUtils.loadAnimation
                (getContext(),
                 R.anim.zoom);
```

```
            break;
```

```
    }
```

```
    if (anim != null) {
```

```
        imageView.startAnimation(anim);
```

```
    }
```

```
}
```

```
}
```

```
}
```

```
}
```
