

* Practical - 2 *

- * Basic android widgets Develop an application that asks user id and password. Upon receiving user id and password, application should compare both of them with prescribed values. Application should display appropriate message to user.

* activity_main.xml

```
<RelativeLayout xmlns:android="
    http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:padding="16dp">
```

<EditText

```
    android:id="@+id/username"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:hint="Username"/>
```

<EditText

```
    android:id="@+id/password"
    android:layout_width="match_parent"
    android:layout_height="wrap_content"
    android:hint="Password"
    android:layout_below="@+id/username"
    android:layout_marginTop="10dp"
    android:inputType="textPassword"/>
```

<Button

```
android:id="@+id/loginButton"
android:layout_width="match_parent"
android:layout_height="wrap_content"
android:text="Login"
android:layout_below="@id/password"
android:layout_marginTop="20dp"/>
```

</RelativeLayout>

* activity_home.xml

```
<RelativeLayout xmlns:android="http://schemas.android.com/apk/res/android"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:background="#A9A9A9">
```

<TextView

```
android:id="@+id/welcomeText"
android:layout_width="wrap_content"
android:layout_height="wrap_content"
android:layout_marginTop="50dp"
android:layout_centerHorizontal="true"/>
```

</RelativeLayout>

* MainActivity.java

```
package com.example.loginModule;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.EditText;
import android.widget.Toast;
import androidx.appcompat.app.AppCompatActivity;
```

```
public class MainActivity extends AppCompatActivity {
    EditText username, password;
    Button loginButton;
```

⑨ Override

```
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);
```

```
    username = findViewById(R.id.username);
    password = findViewById(R.id.password);
    Button loginButton = findViewById(R.id.loginButton);
```

```
    loginButton.setOnClickListener(new View.OnClickListener() {
```

⑨ Override

```
    public void onClick(View v) {
        String user = username.getText().toString();
        String pass = password.getText().toString();
```

```

        if (user.equals("admin") &&
            pass.equals("1234")) {
            Intent intent = new Intent(MainActivity.this,
                                     HomeActivity.class);
            intent.putExtra("USERNAME", user);
            startActivity(intent);
        } else {
            Toast.makeText(MainActivity.this, "Invalid Username
                                     or Password",
                            Toast.LENGTH_SHORT).show();
        }
    }
}
}
}

```

* HomeActivity.java

```

package com.example.loginmodule;
import android.os.Bundle;
import android.widget.TextView;
import androidx.appcompat.app.AppCompatActivity;

public class HomeActivity extends AppCompatActivity {
    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_home);
        TextView welcomeText = findViewById(R.id.welcomeText);
        String username = getIntent().getStringExtra("USERNAME");
        welcomeText.setText("Welcome, " + username + "!");
    }
}

```

* Output *
