

* Lab 2 : Wireshark : Packet Capture and Analysis

Objective: To use Wireshark for packet filtering and analyzing source and destination IP addresses.

Tools Required: Wireshark

Theory: Wireshark is a network protocol analyzer used to capture and interactively browse network traffic. It supports hundreds of protocols and filtering mechanisms.

Procedure:

1. Launch Wireshark and select active network interface.
2. Start capture and filter traffic using:
 - ip.src == 192.168.1.2
 - ip.dst == 192.168.1.5
 - http, tcp.port == 80, udp

3. Analyze protocols using Statistics > Protocol Hierarchy.
4. Detect source and destination IPs via packet details
5. Use color rules for better visibility.
6. Save capture file for later analysis.
